

WEEKLY DIARY

Week Number	Week 1	Submission Date	13 /06/2026
--------------------	--------	------------------------	-------------

Tasks to be Done

1.	Study basics of cyber attacks and types (DoS, DDoS, MITM, Injection, Malware)
2.	Study normal vs anomaly network traffic patterns and detection techniques
3.	Explore ML/DL methods for anomaly detection (LSTM, Autoencoder, CNN, Random Forest)
4.	Literature Review — study 3 peer-reviewed papers

Tasks Completed

1.	Completed Literature Review of 12 verified peer-reviewed papers from IEEE Xplore, Elsevier
2.	Studied ML/DL methods
3.	
4.	

Remarks / Observations

Week 1 tasks completed successfully. Gained strong theoretical understanding of federated learning, network anomaly detection, and cybersecurity attack types. Literature review of 12 verified papers completed covering key FL-IDS research from 2017–2022
